

Report
Of
**Data Management and Analysis Using
Microsoft Excel**

Submitted
To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student : **25SCS1003004398**

Name of Student : **Rohan Garg**

Batch : **2025-29**

2026-27

CANDIDATE'S DECLARATION

I, Rohan Garg, student of B.Tech – Computer Science and Engineering at IILM University, hereby declare that this internship report titled “Sales Data Analysis and Reporting Using Microsoft Excel” is prepared as a record of my internship experience at XcripTech.

The report presents the learning activities, analytical techniques and spreadsheet-based work undertaken during the internship. The work described in this report focuses on data preparation, cleaning, analysis, reporting and visualization using Microsoft Excel.

I further declare that the information presented in this report is prepared for academic evaluation and reflects the internship-related learning and practical activities undertaken during the internship period.

Signature: 

Student Name: Rohan Garg

Roll No.: 25SCS1003004398

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to XcripTech for providing me with the opportunity to undertake an internship as a Data Analyst Intern. The internship provided me with an opportunity to understand the practical application of data-analysis concepts and spreadsheet-based techniques.

I am thankful to the mentors and trainers associated with the internship for their guidance and support throughout the learning process. Their guidance helped me understand important concepts related to data cleaning, data organization, Excel formulas, VLOOKUP, Pivot Tables, sorting, filtering and data visualization.

I would also like to express my gratitude to the faculty members of IILM University for their academic guidance and encouragement during the internship and preparation of this report.

Finally, I am thankful to my family and friends for their continuous support and encouragement throughout the internship period.

Signature: 

Student Name: Rohan Garg

Roll No.: 25SCS1003004398

Date: 10-07-2026

To whomsoever it may concern

This is to certify that **Rohan Garg** has successfully completed his internship with **XcripTech** as a **Data Analyst Intern** from **May 28, 2026** to **July 9, 2026**.

During this period, he worked extensively on Microsoft Excel for data management and analysis. His responsibilities included data entry, data cleaning, report generation, and maintaining structured datasets. He also worked on creating dashboards, using formulas (such as VLOOKUP, Pivot Tables), and preparing reports for business insights.

He demonstrated strong analytical skills, attention to detail, and the ability to handle large datasets efficiently. His performance during the internship was found to be very good, and he completed all assigned tasks with dedication and professionalism.

We wish him all the best for his future career.

Thanks & Regards

Sincerely,

Xcrip Tech

4. PROJECT DESCRIPTION

4.1 Introduction

Data analysis plays an important role in converting raw information into meaningful and useful insights. Organizations generate large amounts of data through their daily activities, and proper analysis of this data can help in understanding performance, identifying patterns and supporting informed decision-making.

During my internship as a Data Analyst Intern at XcripTech, I gained practical exposure to spreadsheet-based data analysis using Microsoft Excel. The internship focused on understanding the basic workflow of working with structured datasets, beginning with data preparation and continuing through cleaning, processing, analysis and reporting.

As part of the internship learning activities, a sales-data analysis exercise was used to understand the application of common Excel techniques in a business-oriented context. The work involved organizing sales records, checking data quality, applying formulas and lookup functions, creating summaries using Pivot Tables and presenting analytical information through charts and reports.

The internship helped connect theoretical concepts of data handling with practical spreadsheet operations and improved my understanding of how structured data can be transformed into useful analytical information.

4.2 Organization Profile

XcripTech provided an environment for gaining practical exposure to data-related tools and analytical techniques during the internship. The internship role was focused on developing fundamental skills required for working with structured datasets and preparing analytical reports.

As a Data Analyst Intern, the learning activities included data entry, data organization, data cleaning, structured dataset management, report preparation, dashboard-related work, VLOOKUP and Pivot Tables.

The internship provided exposure to spreadsheet-based methods that are commonly used for organizing and analyzing business information. Through these activities, I developed a better understanding of how raw records can be prepared and converted into summarized information for reporting purposes.

The internship also helped develop professional skills such as attention to detail, systematic working, analytical thinking and presentation of information.

4.3 Problem Statement

Raw sales data may contain a large number of records that are difficult to analyze directly. Without proper organization and preparation, identifying useful patterns and comparing different aspects of sales performance can become time-consuming.

The primary problem addressed during the internship learning exercise was to organize and analyze sales-related data using Microsoft Excel so that important information could be summarized and presented in an understandable form.

The work focused on addressing the following requirements:

- Organizing raw sales records into a structured dataset.
- Checking the dataset for duplicate and missing records.
- Applying appropriate data-cleaning techniques.
- Using formulas and lookup functions to process information.
- Summarizing sales information using Pivot Tables.
- Presenting analyzed information through charts and reports.
- Developing an understanding of how spreadsheet tools can support basic business analysis.

The overall objective was to transform structured sales records into useful summarized information through a systematic data-analysis workflow.

4.4 Project Objectives

- To understand the fundamentals of sales data analysis.
- To organize sales records into a structured format.
- To understand and apply basic data-cleaning techniques.
- To identify duplicate records and validate data quality.
- To check datasets for missing or incomplete information.
- To use Excel formulas for calculations and data processing.
- To understand the practical application of VLOOKUP.
- To create Pivot Tables for summarizing sales information.
- To use sorting and filtering for efficient data examination.
- To apply conditional formatting to highlight important information.
- To understand the use of charts for data visualization.
- To prepare structured sales reports from analyzed data.
- To develop analytical thinking and attention to detail.

4.5 Scope of the Work

The scope of the internship work focused on fundamental spreadsheet-based data analysis and reporting using Microsoft Excel.

The major areas covered were data entry and organization, structured dataset management, data cleaning and validation, duplicate record checking, missing-value checking, sorting and filtering, Excel formulas and calculations, VLOOKUP-based data retrieval, Pivot Table creation, chart preparation, conditional formatting, and sales reporting and visualization.

The work was primarily focused on descriptive analysis of available sales information. It did not involve advanced predictive modelling, machine learning, database development or the creation of a dedicated software application.

The overall workflow followed during the internship can be represented as:

Data Preparation → Data Cleaning → Data Validation → Data Processing → Data Analysis → Visualization → Reporting

4.6 Technologies and Tools Used

Microsoft Excel was the primary tool used for the internship-related data analysis and reporting activities. Excel provided the required features for organizing, processing, summarizing and presenting structured sales information.

S. No.	Tool / Feature	Purpose
1	Microsoft Excel	Primary tool for data analysis and reporting
2	Data Entry	Recording and organizing sales information
3	Data Cleaning	Improving the quality and consistency of data
4	Remove Duplicates	Checking and removing repeated records
5	Missing Value Check	Identifying incomplete records
6	Excel Formulas	Performing calculations and processing data
7	VLOOKUP	Retrieving related information from structured tables
8	Sorting and Filtering	Examining and organizing selected records
9	Conditional Formatting	Highlighting relevant values and patterns
10	Pivot Tables	Summarizing and analyzing sales information
11	Charts	Presenting analytical information visually
12	Dashboard / Reporting	Presenting summarized information in a consolidated format

4.7 Data Analysis Workflow

The data-analysis workflow followed during the internship consisted of several sequential stages.

1. Data Preparation — The available sales information was organized into a structured tabular format. The fields were reviewed to understand the type of information available and its relevance to the analysis.
2. Data Cleaning — The dataset was examined for inconsistencies, duplicate records and incomplete information. Basic Excel features were used to improve the organization and readability of the data.
3. Data Validation — The prepared data was checked before analysis. Duplicate and missing-value checks were performed to ensure that the available records could be used for further processing.
4. Data Processing — Excel formulas and lookup functions were used to process information and perform required calculations. VLOOKUP was used to retrieve corresponding information from structured data tables.
5. Data Summarization — Pivot Tables were created to summarize sales information according to different categories and dimensions.
6. Visualization — Charts were used to represent summarized information visually and make comparisons and patterns easier to understand.
7. Reporting — The final information was organized into a structured sales report to present the results of the analysis.

Figure 4.1: Data Analysis Workflow

Data Preparation → Data Cleaning → Validation → Processing → Pivot Analysis →
Visualization → Reporting

4.8 Methodology

The methodology followed during the internship consisted of a systematic approach to preparing, processing and analyzing sales data using Microsoft Excel.

4.8.1 Data Preparation

The first stage involved organizing the available sales records into a structured spreadsheet. Each record was arranged in rows and relevant attributes were maintained in separate columns.

The dataset was reviewed to understand the available fields and determine which information could be used for analysis.

4.8.2 Data Cleaning

Data cleaning was performed to improve the quality and consistency of the dataset before analysis.

The cleaning process included reviewing the dataset structure, checking for inconsistent entries, checking duplicate records, checking missing values, organizing the data into a consistent format, and using sorting and filtering for easier inspection.

4.8.3 Duplicate and Missing-Value Validation

Duplicate records were checked to ensure that repeated entries did not affect the analysis. Missing-value checking was also performed to identify incomplete records.

These validation steps helped ensure that the dataset was in a suitable condition before calculations and summaries were created.

4.8.4 Sorting and Filtering

Sorting and filtering were used to examine selected portions of the dataset.

Sorting allowed records to be arranged according to different fields, while filtering helped display only the records that matched selected criteria.

These features made it easier to inspect specific categories and compare different groups of sales records.

4.8.5 Excel Formulas

Excel formulas were used to perform calculations and process sales-related information.

Formulas reduced repetitive manual calculations and provided a consistent method of deriving values from the available data.

The use of formulas also helped in understanding how spreadsheet functions can be applied to structured business datasets.

4.8.6 VLOOKUP

VLOOKUP was used to retrieve related information from a structured reference table.

The lookup process involved selecting a relevant value as the lookup key and retrieving its corresponding information from the reference table.

The application of VLOOKUP provided practical understanding of how information from different tables can be connected and used during data processing.

4.8.7 Pivot Table Analysis

Pivot Tables were used to summarize sales information and examine the dataset from different perspectives.

The analysis included areas such as sales performance, product-related information, category-wise information, sales type, payment mode, monthly information, and profit-related information.

Pivot Tables reduced the need to manually examine individual records and made it easier to create summarized views of the dataset.

4.8.8 Charts and Visualization

Charts were used to present summarized sales information visually.

Visual representation made it easier to compare different categories and observe patterns in the analyzed information.

Different chart formats can be used depending on the type of analysis, including column charts, bar charts and line charts.

The charts prepared during the learning exercise were intended to support the interpretation of summarized sales information.

4.8.9 Sales Reporting

The analyzed information was organized into a sales report containing important summaries and visual representations.

The report provided a consolidated view of the analysis and demonstrated how spreadsheet-based analysis can be converted into a business-oriented reporting format.

4.8.10 Overall Methodology

The complete methodology can be summarized as:

**Raw Sales Data → Cleaning → Validation → Formulas/VLOOKUP → Pivot Tables
→ Charts → Sales Report**

This methodology provided practical exposure to the basic stages involved in spreadsheet-based sales data analysis.

4.9 Expected Outcomes

- Improved understanding of structured sales data.
- Practical knowledge of data cleaning and validation.
- Understanding of duplicate and missing-value checking.
- Improved ability to organize and examine datasets.
- Practical application of Excel formulas.
- Understanding of VLOOKUP for data retrieval.
- Experience in creating Pivot Tables.
- Understanding of charts and data visualization.
- Improved ability to prepare structured sales reports.
- Better understanding of spreadsheet-based business analysis.
- Development of analytical thinking and attention to detail.
- Improved proficiency in Microsoft Excel.

Overall, the internship helped develop a foundation in data analysis by providing exposure to the workflow of preparing, processing, summarizing and presenting structured sales information.

4.10 Internship Completion Certificate and Communication Proof

4.10.1 Internship Completion Certificate

The internship completion certificate issued by XcripTech serves as official documentation of the internship completed in the role of Data Analyst Intern.

To whomsoever it may concern

This is to certify that **Rohan Garg** has successfully completed his internship with **XcripTech** as a **Data Analyst Intern** from **May 28, 2026** to **July 9, 2026**.

During this period, he worked extensively on Microsoft Excel for data management and analysis. His responsibilities included data entry, data cleaning, report generation, and maintaining structured datasets. He also worked on creating dashboards, using formulas (such as VLOOKUP, Pivot Tables), and preparing reports for business insights.

He demonstrated strong analytical skills, attention to detail, and the ability to handle large datasets efficiently. His performance during the internship was found to be very good, and he completed all assigned tasks with dedication and professionalism.

We wish him all the best for his future career.

Thanks & Regards

Sincerely,

Xcrip Tech

ROHAN GARG

Gali No-3 Phase 1, B Block 18,
Shiv Vihar, Karawal Nagar, Delhi 110094.

Dear Rohan,

It gives us great pleasure in offering you an opportunity to join Xcriptech as an Intern from 28th may 2026 for a period of 43 days.

Based on your capabilities and qualifications, we believe that this internship opportunity will help you gain valuable practical experience and enhance your professional skills. We are confident that your contribution and learning during the internship period will be beneficial to both you and the organization.

During your internship, you will be assigned tasks and responsibilities according to the requirements of the organization and under the guidance of your reporting manager.

You will also be required to submit the following documents on the date of your reporting:

- a. Aadhaar Card
- b. Two passport-sized photographs
- c. Copies of Educational Qualifications
- d. Updated Resume

Please note that this internship is for a fixed duration and does not guarantee permanent employment with the organization. However, based on your performance and the requirements of the company, you may be considered for suitable opportunities in the future.

We look forward to your acceptance of our Internship Offer and to your joining our organization. As a token of acceptance, kindly sign the offer.

Sincerely,

Anand Kumar
Director

I have read and understood the terms and conditions specified above and hereby accept the same.

(Rohan Garg)
